News Release

NRI SecureTechnologies and Simeio Solutions to Explore Collaborative Partnership to Launch Leading-Edge Identity and Access Management Service in Japan

TOKYO / HOBOKEN, NJ - April 20, 2015 - NRI SecureTechnologies, Ltd. (HQ: Chiyoda-ku, Tokyo, Japan, President: Jun Odashima, hereinafter NRI Secure) and Simeio Solutions, Inc. (HQ: Hoboken, New Jersey, United States, CEO: Hemen Vimadalal, hereinafter Simeio) have reached an agreement to commence discussions about the launch of the Japanese operation base of the Simeio Identity Intelligence Center™ (IIC), the first and only solution of its kind designed specifically to operate, monitor and defend complex, multi-vendor identity and access management (IAM) infrastructures, and to leverage those infrastructures to deliver actionable business intelligence. Both companies are collaborating to enter into a partnership agreement within May, 2015.

Issues for enterprises operating identity and access management infrastructures

As the number and variety of systems in the IT environment have increased, so too has the challenge of protecting them. For enterprises, managing information security has become critically important in the face of increasingly aggressive and sophisticated insider threats, cyber attacks, and information theft by advanced persistent threat (APT) attacks. While IAM is recognized as important infrastructure to control these threats, automation of IAM operations is still lagging. Many organizations are saddled with aging, complex, multi-vendor IAM systems. As a result, it has been difficult for many to manage and monitor these systems effectively.

Our Intent of launching Simeio IIC™ in Japan

In order to address these issues, NRI Secure and Simeio are teaming up to provide Simeio IIC, the cutting-edge and comprehensive IAM solution, in the Japanese market, as well as consulting and IAM operation services, including:
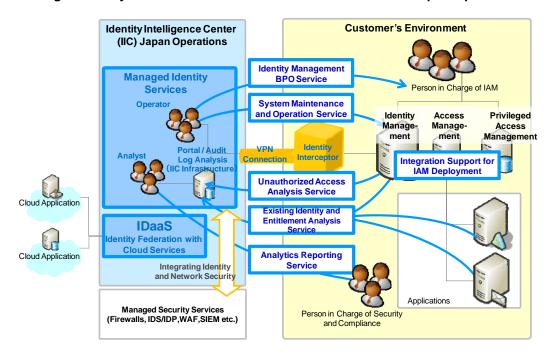

Managed Identity Services:
- Identity Management BPO (Business Process Outsourcing) Service
- System Maintenance and Operation Service
- Unauthorized Access Analysis Service
- Existing Identity and Entitlement Analysis Service
- Analytics Reporting Service

Cloud-based IAM Services:
- IDaaS (Identity as a Service; Service Onboarding and Identity Federation with Cloud Services)

"Managed Identity Services" and "IDaaS" Architecture of the IIC Japan Operations
